TIVAR® Sterra™ UHMW-PE

Recycled Ultra High Molecular Weight Polyethylene

TIVAR® Sterra™ shapes are produced from re-processed, industrial ultra-high molecular weight polyethylene materials. These recycled shapes are then re-purposed for use in a variety of industries such as construction and heavy equipment, agriculture and grain handling, bulk material and parcel handling, and automotive and transportation.

As a premium grade UHMW-PE that is both economical and eco-friendly, TIVAR® Sterra™ components exhibit excellent abrasion and corrosion resistance, outstanding impact strength, minimal moisture absorption, and a low coefficient of friction. For these reasons, TIVAR® Sterra™ UHMW-PE is often a favored solution for wear and outrigger pads, strips, rails, guides, rollers, conveyors, chutes, hoppers, impact plates, and asphalt equipment components.

As part of the Sterra™ product portfolio, TIVAR® Sterra™ contains recycled UHMW-PE and therefore is associated with a significantly lower carbon footprint compared to similar materials derived from non-recycled feedstocks.

PRODUCT DATASHEET

		ISO*			ASTM*		
		Test methods	Units	Indicative values	Test methods	Units	Indicative values
Thermal properties (1)	Melting temperature (DSC, 10°C (50°F) / min)	ISO 11357-1/-3	°C	135	ASTM D3418	°F	
	Glass transition temperature (DMA- Tan δ) (2)		°C			°F	
	Thermal conductivity at 23°C (73°F)		W/(K.m)	0.4		BTU in./(hr.ft².°F)	
	Coefficient of linear thermal expansion (-40 to 150 °C) (-40 to 300°F)				ASTM E-831 (TMA)	µin./in./°F	
	Coefficient of linear thermal expansion (23 to 100°C) (73°F to 210°F)		µm/(m.K)	200			
	Heat Deflection Temperature: method A: 1.8 MPa (264 PSI)	ISO 75-1/-2	°C		ASTM D648	°F	
	Continuous allowable service temperature in air (20.000 hrs) (3)		°C	80		°F	180
	Min. service temperature (4)		°C	-150		°F	-238
	Flammability: UL 94 (3 mm (1/8 in.)) (5)			HB			HB
	Flammability: Oxygen Index	ISO 4589-1/-2	%	20			
Mechanical Properties (6)	Tensile strength	ISO 527-1/-2 (7)	MPa	20	ASTM D638 (8)	PSI	
	Tensile strain (elongation) at yield	ISO 527-1/-2 (7)	%	18	ASTM D638 (8)	%	
	Tensile strain (elongation) at break	ISO 527-1/-2 (7)	%	> 50	ASTM D638 (8)	%	
	Tensile modulus of elasticity	ISO 527-1/-2 (9)	MPa	500	ASTM D638 (8)	KSI	
	Shear Strength			20	ASTM D732	PSI	2900
	Compressive stress at 1 / 2 / 5 % nominal strain	ISO 604 (10)	MPa	6 / 9 / 15			
	Compressive strength				ASTM D695 (11)	PSI	
	Charpy impact strength - unnotched	ISO 179-1/1eU	kJ/m²	no break			
	Charpy impact strength - notched	ISO 179-1/1eA	kJ/m²	116P			
	Charpy impact strength - double 14° notched	ISO 21304-2	kJ/m²	180			
	Izod Impact notched				ASTM D256	ft.lb./in	
	Flexural strength	ISO 178 (12)	MPa	18	ASTM D790 (13)	PSI	
	Flexural modulus of elasticity	ISO 178 (12)	MPa	520	ASTM D790	KSI	
	Relative volume loss "sand-slurry" (ISO vsTIVAR®1000; ASTM vs1018 Steel)	ISO 15527	Index=100	116	ASTM D4020	Index=100	
	Shore Hardness D (14)	ISO 868		60	ASTM D2240		
Electrical Properties	Electric strength	IEC 60243-1 (15)	kV/mm		ASTM D149	Volts/mil	
	Volume resistivity	IEC 62631-3-1	Ohm.cm		ASTM D257	Ohm.cm	
	Surface resistivity	ANSI/ESD STM 11.11	Ohm/sq.	>10E13	ANSI/ESD STM 11.11	Ohm/sq.	>10E13
	Dielectric constant at 1 MHz	IEC 62631-2-1			ASTM D150		
	Dissipation factor at 1MHz	IEC 62631-2-1			ASTM D150		
Miscellaneous	Colour			Green			Green
	Density	ISO 1183-1	g/cm³	0.94			
	Specific Gravity				ASTM D792		
	Water absorption after 24h immersion in water of 23 °C (73°F)	ISO 62 (16)	%	0.1	ASTM D570 (17)	%	
	Water absorption at saturation in water of 23 °C (73°F)		%	0.1	ASTM D570 (17)	%	
	Wear rate	ISO 7148-2 (18)	µm/km		QTM 55010 (19)	$in^3.min/ft.lbs.hrX10^{-10}$	
	Dynamic Coefficient of Friction (-)	ISO 7148-2 (18)		-	QTM 55007 (20)		
	Limiting PV at 100 FPM (safety factor 4)				QTM 55007 (21)	$ft.lbs/in^2.min$	
	Limiting PV at 0.1 / 1 m/s cylindrical sleeve bearings		MPa.m/s	0.08 / 0.05			
	Chemical Resistance	www.mcam.com/en/support/chemical-resistance-information			www.mcam.com/en/support/chemical-resistance-information		

Note: 1 g/cm³ = 1,000 kg/m³ ; 1 MPa = 1 N/mm² ; 1 kV/mm = 1 MV/m NYP: there is no yield point

This table, mainly to be used for comparison purposes, is a valuable help in the choice of a material. The data listed here fall within the normal range of product properties of dry material. However, they are not guaranteed and they should not be used to establish material specification limits nor used alone as the basis of design. See the remaining notes on the next page.

Notes, see datasheet on page 1

1. The figures given for these properties are for the most part derived from raw material supplier data and other publications.
2. Values for this property are only given here for amorphous materials and for materials that do not show a melting temperature (PBI & PI).
3. Temperature resistance over a period of min. 20,000 hours. After this period of time, there is a decrease in tensile strength – measured at 23 °C – of about 50 % as compared with the original value. The temperature value given here is thus based on the thermal-oxidative degradation which takes place and causes a reduction in properties. Note, however, that the maximum allowable service temperature depends in many cases essentially on the duration and the magnitude of the mechanical stresses to which the material is subjected.
4. Impact strength decreasing with decreasing temperature, the minimum allowable service temperature is practically mainly determined by the extent to which the material is subjected to impact. The value given here is based on unfavourable impact conditions and may consequently not be considered as being the absolute practical limit.
5. These estimated ratings, derived from raw material supplier data and other publications, are not intended to reflect hazards presented by the material under actual fire conditions. There is no ‘UL File Number’ available for these stock shapes.
6. Most of the figures given for the mechanical properties are average values of tests run on dry test specimens machined out of rods 40-60 mm when available, else out of plate 10-20mm. All tests are done at room temperature (23° / 73°F)
7. Test speed: either 5 mm/min or 50 mm/min [chosen acc. to ISO 10350-1 as a function of the ductile behaviour of the material (tough or brittle)] using type 1B tensile bars
8. Test speed: either 0.2"/min or 2"/min or [chosen as a function of the ductile behaviour of the material (brittle or tough)] using Type 1 tensile bars
9. Test speed: 1 mm/min, using type 1B tensile bars
10. Test specimens: cylinders Ø 8 mm x 16 mm, test speed 1 mm/min
11. Test specimens: cylinders Ø 0.5" x 1", or square 0.5" x 1", test speed 0.05"/min
12. Test specimens: bars 4 mm (thickness) x 10 mm x 80 mm ; test speed: 2 mm/min ; span: 64 mm.
13. Test specimens: bars 0.25" (thickness) x 0.5" x 5" ; test speed: 0.11"/min ; span: 4"
14. Measured on 10 mm, 0.4" thick test specimens.
15. Electrode configuration: Φ 25 / Φ 75 mm coaxial cylinders ; in transformer oil according to IEC 60296 ; 1 mm thick test specimens.
16. Measured on discs Ø 50 mm x 3 mm.
17. Measured on 1/8" thick x 2" diameter or square
18. Test procedure similar to Test Method A: “Pin-on-disk” as described in ISO 7148-2, Load 3MPa, sliding velocity= 0,33 m/s, mating plate steel Ra= 0.7-0.9 µm, tested at 23°C, 50%RH.
19. Test using journal bearing system, 200 hrs, 118 ft/min, 42 PSI, steel shaft roughness 16±2 RMS micro inches with Hardness Brinell of 180-200
20. Test using Plastic Thrust Washer rotating against steel, 20 ft/min and 250 PSI, Stationary steel washer roughness 16±2 RMS micro inches with Rockwell C 20-24
21. Test using Plastic Thrust Washer rotating against steel, Step by step increase pressure, Test ends when plastic begins to deform or if temperature increases to 300°F, a 4:1 safety factor has been applied to the posted value.

It thus remains the customer's sole responsibility to test and assess the suitability and compatibility of Mitsubishi Chemical Advanced Materials' Products for its intended applications, processes and uses, and to choose those Products which according to its assessment meet the requirements applicable to the specific use of the finished product. The customer undertakes all liability in respect of the application, processing or use of the aforementioned information or product, or any consequence thereof, and shall verify its quality and other properties.
